

EtherStream™

EtherStream™ is a unique high speed Leased Line Internet access solution, available at a fraction of the cost of a traditional Leased Line.

Easynet Connect's EtherStream™ is a cost effective, scalable, Layer 2 Ethernet service delivered using our national Local Loop infrastructure. With connections from 6Mbps to 20Mbps and coverage across the UK, EtherStream™ provides a highly reliable and secure method of transmitting critical high volume traffic.

If you are currently using a high speed IP Leased Line connection, EtherStream™ is the ideal solution to getting more performance from your budget, with no compromises and no catches.

Key features

Bandwidth up to 20Mbps: Depending upon your requirements, EtherStream™ offers a wide range of bandwidths from 6Mbps to 20Mbps at 2Mbps intervals. Bandwidth options will increase in the future as Easynet Connect continues to evolve this successful product.

Guaranteed bandwidth: No contention and no sharing of ports equates to a quality of service you know you can rely on.

Fully managed: Provided with a Cisco router on the customer site which is configured and installed by our trained specialist engineers.

Back up options: A range of back up options are available to be deployed with EtherStream™ to suit your needs. Back up options include ISDN, ADSL and SDSL.

99.9% guaranteed availability: Peace-of-mind provided by our SLA with service credits for performance outside these committed levels.

Unlimited IP addresses: Subject to accordance with RIPE allocation guidelines we will provide all the IP addresses you need to make a success of your online business.

Real time reporting: Enables you to see how your connection is being used, predict growth trends and budget for future bandwidth requirements.

DNS: Register or transfer, Primary and Secondary hosting for one domain.

Email relay: SMTP relay service for one domain.

- Bandwidth from 6Mbps to 20Mbps
- Guaranteed bandwidth
- Fully managed
- Back up options
- 99.9% guaranteed availability
- Unlimited IP addresses
- Real time reporting
- DNS
- Email relay

Product benefits

Leased Line service levels: EtherStream™ is an Internet connection your business can rely on. This is backed up by our Service Level Agreement of 99.9% availability, complete with service credits. Piece-of-mind and a financial guarantee.

Resilient: EtherStream™ is based on either 4 or 8 connections, if one of the connections fail the service will remain working with the remaining bandwidth and the fault automatically raised. Once the connection is activated, full bandwidth will be restored automatically.

Value for money: If you are currently using an IP Leased Line connection, EtherStream™ is the ideal solution to getting more performance from your budget, with no compromises and no catches.

Scalable bandwidth: EtherStream offers scalable bandwidth. This allows organisations to set low capacity whilst they determine requirements and then simply increase capacity when required. Hence, future bandwidth requirements can be met, without costly upgrades and complicated migration processes.

Pricing

EtherStream™ pricing is simple to understand and very attractive. There is a flat installation charge which covers the Cisco router, other equipment, managed installation and connection of your EtherStream™ Service.

Suggested back up options are SDSL and ADSL. These services will have a one off connection fee and annual rental charge depending upon the speed of the circuit. There is also the option of an ISDN back up circuit which can be provided at a lower cost if included in the original installation. There is no rental charge for the ISDN circuit.

The minimum contract term for EtherStream™ is 12 months. Annual rental will vary by your chosen bandwidth.

- One off connection charge
- Annual rental, varies by bandwidth
- 12 month minimum term
- Optional ADSL back up circuit, connection fee and annual rental
- Optional SDSL back up circuit, connection fee and annual rental
- Optional ISDN back up circuit, one off charge

Back up options

Resiliency is important to our customers and a back up circuit is now standard practice. We recommend an SDSL circuit as the ideal back up to the EtherStream™ Internet Access service. In the event of a network fault, your circuit will fail over to a 2Mbps symmetrical DSL circuit so that business critical traffic such as email can continue to be delivered.

ADSL and ISDN are also provided as back up options to the EtherStream Internet Access service.

Service coverage

In the UK, Easynet owns one of the most extensive fibre optic networks in the UK at 6030Km with 62 core network Points of Presence (PoPs) and 1,176 Network access points. This covers over 70% of UK homes and businesses.

Easynet's network encompasses the UK, France, Germany, Belgium, Holland and Spain. Each Easynet operation has its own network centres, hosting and colocation facilities, national peering arrangements and international connectivity.

Why Easynet Connect

An innovative low cost solution is always appealing but supplier confidence is key. Easynet was established in 1994 and has been part of BSKyB Group since early 2006.

With over 1,200 UK Network Points of Presence and 6030Km of fibre the Easynet Connect Network has access to over 70% of UK homes and businesses, making it the second largest in the UK.

Easynet has a proven track record of innovation in the UK market. Easynet was the first provider in the UK to provide DSL services over an unbundled local loop and has pioneered managed LLU services for business.

We have a wide range of services from business class ADSL and SDSL through high quality Leased Line equivalent and Ethernet based services, allowing a clear growth path for any business. Our SDSL coverage exceeds that of BT.

At a glance

- Over a decade of heritage in the UK Business market
- 2nd largest UK network
- 70% UK Home & Business coverage
- 6030Km of fibre
- Largest UK SDSL footprint
- Track record in innovation
- Backing of BSKyB
